## Providing Services

Based on our slogan "People, dreams and technology", CHODAI is dedicated to developing technology for the creation of local infrastructure to help people realize their dreams.

We believe that infrastructure including civil structures such as bridges, tunnels, roads and railways, utilities such as water supply and electricity, as well as harbors, rivers, schools and hospitals are the foundation on which people can build secure and affluent lives.

CHODAI's services cover all project phases from project formation, master planning, preliminary studies, detailed design, cost estimates, bidding and contract documentation, bidding procedures including evaluation, for the operation and maintenance of infrastructure projects.

In addition, CHODAI has conducted several regional development projects under Public-Private Partnership (PPP) especially in the fast-growing Southeast Asian countries, particularly the Philippines, Vietnam, Indonesia, Laos, and Thailand. These long-term projects cover the development of basic infrastructure such as power generation and water supply facilities which help develop local industries and create jobs that contribute to the growth of regional economies.

CHODAI thus incorporates all 17 Sustainable Development Goals (SDGs) into the scope of our business and strives to achieve them in order to create a sustainable world.

## Project Achievements

CHODAI has extensive experience of not only infrastructure technology but also regional development.

Akashi Kaikyo Bridge (Japan)

Small Hydro Plant (Philippines)

Asua Culture (Philippines)

Suez Canal Bridge (Egypt)

Road Design (Tonga)

Rice Processing Mill (Philippines)

MRT Tunnel (Indonesia)

High Speed Railway F/S (Indonesia)
