Services

Our mission is to contribute to the development of society by bringing happiness and business prosperity to our clients through successful project management. As a pioneer of project management in the construction industry, we are promoting projects in different areas, ranging from offices, production facilities, to public facilities such as hospitals and schools. We also work closely with our clients in different phases, from strategic planning at an early phase to optimization of facility management at an O&M phase.

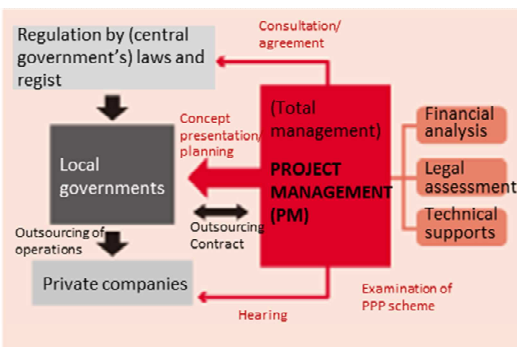

We have engaged with a very wide variety of projects in PPP (Public-Private-Partnership) and regional revitalization: our projects include Japan's first toll road concession, establishment of the community-based integrated care system etc., with a total sales of 1.5 trillion JPY both in Japan and overseas.

Example of general support services

Sometimes research service for a project delegated by a client may become ends without forming the project.

Index's support services for governments

PM coordinates a project from the project planning to its operation, and has a discussion or builds consensus on the system design based on private entities feedbacks or the revision of legal system to realize the concept.

Project Achievement/Technical Expertise

【Project management for PPP road projects in Ghana and Vietnam】

With the strong expertise and knowledge as Project Manager in the construction industry, we have conducted Feasibility Study (F/S) as Project Manager of road PPP projects to determine the project viability with the concept of Sanpo – Yoshi (Three-way satisfaction among public, private and society) for the social infrastructure development in Ghana, Vietnam and other countries.
