Providing Services

IIJ founded in 1992 as the first Japanese Internet Service Provider, provides IP based Internet services to approximately 12,000 corporations and governmental organizations. IIJ's business portfolio varies from cloud computing service, Internet connectivity service, data center service and outsourcing service to systems integration. The advanced operational skills provided by IIJ to its clients are highly valued.

IIJ has spread its high-speed backbone network all the way to the United States, Europe and ASEAN countries. Collaborating with local companies, IIJ also provides cloud computing services, leveraging its established cloud computing brand "IIJ GIO". In addition, IIJ's high efficient modular data center has been delivered to developing countries as well. In the following achievement in Lao P.D.R., the first national data center was established by the project. IIJ not only installed modular data center equipment and cloud services infrastructure, but also transferred IT skills to local staffs for efficient operation. IIJ wishes to develop its business and cooperation projects in Africa and contribute to the society by providing its knowledge and expertise acquired in both Japan and globally, in areas such as IoT, Fin-tech, E-Government, and Smart City.

IIJ's backbone network

Matsue Data Center Park

Shiroi Data Center Campus

IIJ's data centers in Japan

Project Achievement / Technical Expertise
