Providing Services

Based on the company's long-cultivated and proven technologies in areas including super skyscrapers, seismic control, pre-stressed concrete and subterranean construction, Sumitomo Mitsui Construction Co., Ltd. (SMCC) continues to probe diverse areas as it pursues the development of all-new technologies. Through its construction operations, SMCC responds to the diversifying and increasingly sophisticated demands of society as it builds for a richer tomorrow. SMCC's main business are the following:

1. To contract, plan, design and/or supervise civil engineering, architectural, pre-stressed concrete, electrical, piping and other works.
2. To plan, design and supervise marine development, regional development, urban development, natural resource development and environment maintenance
3. To manufacture, sell and lease materials for civil and building works, pre-stressed concrete products, seismic isolating device, seismic damping device, and other machinery and instruments

Japanese manufacturing quality to Asia and to the world.

We make suitable proposals for the environment of overseas countries with optimized process management and the latest technologies, and build a reliable construction system with a high-level quality management and Japanese manufacturing spirit.

We will utilize the local network that we have cultivated over the years and carry out precise project management that can safely execute construction without accidents and disasters.
