Providing Services

Toyo Construction’s strength lies in its unparalleled marine technologies. The company has grown to be one of Japan’s leading marine contractors, with experience in the fields of dredging, reclamation and port construction and energy-related offshore structures. Surrounded by sea on all sides, marine development is essential to Japan. We have completed a number of mega national projects. Our start in operation for overseas civil engineering dates back to 1972 in Singapore. We have established a solid reputation by completing a number of difficult marine and on land construction projects in Southeast Asia, Middle East, Pacific Ocean and African countries. Also we have been involved in a variety of overseas building projects including not only factories for private sector but also hospitals, fish markets and training centers for public sector.
