Providing Services

Since its foundation in 1941, TAISEI KIKO has pioneered Japan's water, sewage, and gas pipeline maintenance sector; continuously engaged on the frontier of technological innovation in product development and maintenance. We have developed retainer glands and various pipe fittings with concept of water pipeline maintenance. Our quake-resistant products have become all the more essential for the pipeline infrastructure and network across Japan and overseas. Unique under pressure construction method is also highly valued.

TAISEI KIKO is firmly committed to research and development, and resolves to supply necessary products for the development and maintenance of waterworks infrastructure, in Japan and overseas.

Project Achievement / Technical Expertise

Ductile cast iron ball type flexible expansion joint called TAI-FLEX (size DN 1000mm) were installed at passenger clearance terminal located at Hong Kong-Zhuhai-Macau Bridge. Building constructed on an artificial island experience land subsidence, and Tai-Flex was chosen to protect the water pipeline.

YANO STOPPER is a temporarily valve which can be installed on water pipeline under pressure. Whether to fix water leakage, or to create bypass, YANO STOPPER is a perfect solution to stop the flow of water temporarily.
