Providing Services

YOKOGAWA has developed its business in the fields of measurement, control and information as its technological domain and has contributed to the development of the industrial world.

As a result of our experience and achievements as a manufacturer of control and monitoring systems with the No. 1 market share in Japan, as well as the recognition of our global structure with 230 sales and service bases in 80 countries around the world, we have received many orders for overseas water-related projects.

We will contribute to the water supply and sewage business in the 21st century as a "solution provider that supports the improvement of water supply and sewage management efficiency" by providing optimal solutions from the customer's perspective using the latest technology in the water supply and sewage field.

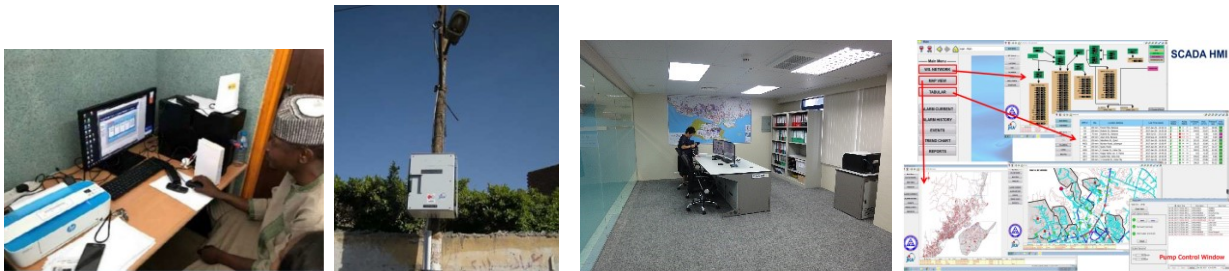

Project Achievement/Technical Expertise

YOKOGAWA has delivered control and monitoring systems for water business such as water supply and sewerage plants, desalination plants, and water distribution monitoring all over the world.

We have also many delivery records in control and monitoring systems for ODA water projects by the Japanese government, including the following countries Egypt, Nigeria, and the Philippines.

Our strength is in the global service system mentioned above and our delivery experiences of more than several hundred control and monitoring systems for water plants in Japan.
