Clients	JICA (Japan International Cooperation Agency), World Bank, ADB (Asian Development Bank), JETRO (Japan External Trade Organization), Governments		

Providing Services

CTI Engineering International Co., Ltd. (CTI) provides high quality consultancy services to achieve sustainable infrastructure development at all stages of the project development from master plan and feasibility study preparation to detailed design and construction supervision. Our services cover all aspects in the fields of water resources, transportation development, disaster management, environment and urban development with projects in more than 60 countries. We work closely with our clients to meet the project demands in all phases.

Water Resource Management

Based on the concept of Integrated Water Resource Management, we support the project formulation for water resource management and development on the bases of state and river basin.

Disaster Management

In consideration of natural conditions, socio-economic state and regional development programs in the target area, we put forward a proposal on countermeasures effective for disaster risk mitigation and management, including an appropriate allocation between the structural measures against natural disasters and the non-structural measures for damage determent and mitigation.

Water Supply

We provide engineering services for planning, designing and construction supervision of infrastructure in the sector of rural and urban water supply.

Roads, Bridges and Transport

We provide extensive consulting services including formulation of master plans, feasibility studies, designing, construction supervision, operation & maintenance and others in the sector of roads, bridges and traffic.

Sewerage and Drainage

CTI group enjoys the best achievement and the most sophisticated expertise in the sector of sewerage and drainage in Japan. We put forward project planning from the multidisciplinary view in accordance with the circumstances of each country considering the environmental impacts, and support our clients in implementation of the relevant projects.

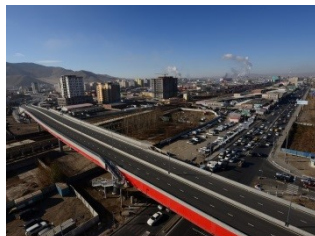

Environment

Environmental management is a pivotal factor for sustainable development. Our areas of specialty in the environment sector include water quality management, solid waste management, ecological conservation, sewerage treatment and so on.

Project Achievement / Technical Expertise

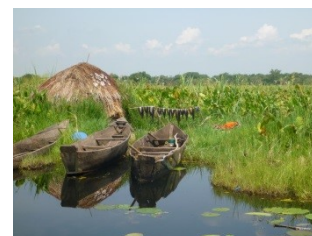

Integrated Water Resources and Flood Management Project for Semarang (Indonesia)

The Project for Construction of Railway Fly-Over in Ulaanbaatar City (Mongolia)

The Project for Rural Water Supply in Baringo Country (Kenya)

National Wetlands Management Project (Uganda)
